(£5–£10 would be appreciated as a contribution to the expenses of the day)

The Lectures...

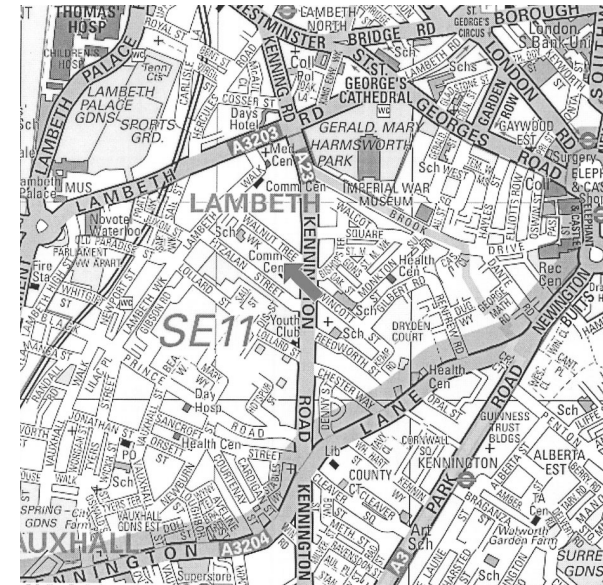

We have three exciting lectures, all based on latest research and brought to you by the scientists themselves.

Dr Clint Perry, School of Biological and Chemical Sciences, QMUL
How in stressed colonies the older foragers die earlier than usual, leading to more younger foragers. This leads to poorer colony performance, accelerating the decline of the colony.

Dr Elizabeth Nichols, Sussex University
How bumble bees can select desirable flowers by detecting differences in pollen (i.e. before they visit the flower).

Dr Amr Sufian, Yemen & University of Liverpool
A novel method for monitoring honey samples via the optical properties of the honey, based on chromatic methods developed at the University of Liverpool.

How to find Roots and Shoots

Nearest underground: Lambeth North or Waterloo

Walnut Tree Walk, London SE11 6DN

<http://www.rootsandshoots.org.uk>
